INTERNATIONAL JOURNAL OF BIOMEDICAL COMPUTING

SUBJECT INDEX

Volume 23 (1988)

Abnormal vaginal bleeding, medical expert system, fuzzy concepts, medical database, 265
Activation velocity, epicardial mapping, epicardial activation pattern, 201
Area under the curve, area under the moment curve, intravenous infusion, non-compartmental analysis, pharmacokinetics, 239
Area under the moment curve, area under the curve, intravenous infusion, non-compartmental analysis, pharmacokinetics, 239
Artificial intelligence, lipoproteins, diagnosis (computer assisted), decision making (computer assisted), 251
Atrial fibrillation, left ventricular function, Doppler ultrasound, 57
Atrioventricular node, electrophysiology, mathematical model, 69
Automatic scoring, sleep, waking, rat, 83

Biofeedback, biomechanics, locomotion, computers, rehabilitation, electric stimulation, 209
Biomechanics, locomotion, computers, rehabilitation, biofeedback, electric stimulation, 209

Clinical research, file management system, query language, data definition language, data entry, 21
Clustering, EEG analysis, Markov processes, 221
Communication aids, rehabilitation, user interface, 177
Computerized analysis, REM, EEG, NPT, sleep, 191
Computerized infusion chemotherapy, food/cancer database, neural networks, neurocomputers, 155
Computers, biomechanics, locomotion, rehabilitation, biofeedback, electric stimulation, 209
—, obstetrics, records, statistics, 43
Computer animation, heart activation, mapping, computer graphics, hidden line elimination, four-dimensional electro-cardiography, 77
Computer assisted diagnosis, laboratory diagnosis, medical decision making, routine diagnostic tests, 125
Computer graphics, heart activation, mapping, computer animation, hidden line elimination, four-dimensional electro-cardiography, 77
Computer modelling, proton depth dose, proton radiotherapy, spot scanning, 33

Data definition language, file management system, clinical research, query language, data entry, 21
Data entry, file management system, clinical research, query language, data definition language, 21
Decision making (computer assisted), lipoproteins, artificial intelligence, diagnosis (computer assisted), 251
Diagnosis (computer assisted), lipoproteins, artificial intelligence, decision making (computer assisted), 251
Doppler ultrasound, atrial fibrillation, left ventricular function, 57

EEG, computerized analysis, REM, NPT, sleep, 191
EEG analysis, Markov processes, clustering, 221
Electric stimulation, biomechanics, locomotion, computers, rehabilitation, biofeedback, 209
Electrophysiology, mathematical model, atrioventricular node, 69
Electrotechnology advances, voice-sensitive computer reporting, medical data-base search, X-ray microtomology, 3
Enzyme kinetics, outliers, 9
Epicardial activation pattern, epicardial mapping, activation velocity, 201
Epicardial mapping, activation velocity, epicardial activation pattern, 201

Epidemic modeling, Latin hypercube sampling, Monte Carlo method, response surface, sensitivity studies, 97, 113
Experimental design, limiting dilution assays, serial dilution assays, maximum likelihood, jackknife method, minimum chi-square, 279

File management system, clinical research, query language, data definition language, data entry, 21
Food/cancer database, computerized infusion chemotherapy, neural networks, neuro-computers, 155
Four-dimensional electro-cardiography, heart activation, mapping, computer graphics, computer animation, hidden line elimination, 77
Fuzzy concepts, medical expert system, abnormal vaginal bleeding, medical database, 265

Heart activation, mapping, computer graphics, computer animation, hidden line elimination, four-dimensional electro-cardiography, 77
Hidden line elimination, heart activation, mapping, computer graphics, computer animation, four-dimensional electro-cardiography, 77

Intravenous infusion, area under the curve, area under the moment curve, non-compartmental analysis, pharmacokinetics, 239
Isometric contraction, muscular sound, spectral analysis, Maximum Entropy Spectrum Estimation, 161

Jackknife method, limiting dilution assays, serial dilution assays, maximum likelihood, minimum chi-square, experimental design, 279

Laboratory diagnosis, computer assisted diagnosis, medical decision making, routine diagnostic tests, 125
Latin hypercube sampling, epidemic modeling, Monte Carlo method, response surface, sensitivity studies, 97, 113
Left ventricular function, atrial fibrillation, Doppler ultrasound, 57
Limiting dilution assays, serial dilution assays, maximum likelihood, jackknife method, minimum chi-square, experimental design, 279
Lipoproteins, artificial intelligence, diagnosis (computer assisted), decision making (computer assisted), 251
Locomotion, biomechanics, computers, rehabilitation, biofeedback, electric stimulation, 209

Mapping, heart activation, computer graphics, computer animation, hidden line elimination, four-dimensional electro-cardiography, 77
Markov processes, EEG analysis, clustering, 221
Mathematical model, electrophysiology, atrio-ventricular node, 69
Maximum Entropy Spectrum Estimation, muscular sound, spectral analysis, isometric contraction, 161
Maximum likelihood, limiting dilution assays, serial dilution assays, jackknife method, minimum chi-square, experimental design, 279
Medical data-base search, electrotechnology advances, voice-sensitive computer reporting, X-ray microtomology, 3
Medical database, medical expert system, fuzzy concepts, abnormal vaginal bleeding, 265
Medical decision making, computer assisted diagnosis, laboratory diagnosis, routine diagnostic tests, 125
Medical expert system, fuzzy concepts, abnormal vaginal bleeding, medical database, 265
Minimum chi-square, limiting dilution assays, serial dilution assays, maximum likelihood, jackknife method, experimental design, 279
Monte Carlo method, epidemic modeling, Latin hypercube sampling, response surface, sensitivity studies, 97, 113
Muscular sound, spectral analysis, Maximum Entropy Spectrum Estimation, isometric contraction, 161

Neural networks, computerized infusion chemotherapy, food/cancer database, neuro-computers, 155
Neurocomputers, computerized infusion chemotherapy, food/cancer database, neural networks, 155
Non-compartmental analysis, area under the curve, area under the moment curve, intravenous infusion, pharmacokinetics, 239
NPT, computerized analysis, REM, EEG, sleep, 191

Obstetrics, computers, records, statistics, 43
Outliers, enzyme kinetics, 9

Patient flow, picture archival and communications systems, simulation, radiology, 137
Pharmacokinetics, area under the curve, area under the moment curve, intravenous infusion, non-compartmental analysis, 239
Picture archival and communications systems, simulation, radiology, patient flow, 137
Proton depth dose, computer modelling, proton radiotherapy, spot scanning, 33
Proton radiotherapy, computer modelling, proton depth dose, spot scanning, 33

Query language, file management system, clinical research, data definition language, data entry, 21

Radiology, picture archival and communications systems, simulation, patient flow, 137
Rat, sleep, waking, automatic scoring, 83
Records, computers, obstetrics, statistics, 43
Rehabilitation, biomechanics, locomotion, computers, biofeedback, electric stimulation, 209
—, communication aids, user interface, 177
REM, computerized analysis, EEG, NPT, sleep, 191
Response surface, epidemic modeling, Latin hypercube sampling, Monte Carlo method, sensitivity studies, 97, 113
Routine diagnostic tests, computer assisted diagnosis, laboratory diagnosis, medical decision making, 125

Sensitivity studies, epidemic modeling, Latin hypercube sampling, Monte Carlo method, response surface, 97, 113
Serial dilution assays, limiting dilution assays, maximum likelihood, jackknife method, minimum chi-square, experimental design, 279
Simulation, picture archival and communications systems, radiology, patient flow, 137
Sleep, computerized analysis, REM, EEG, NPT, 191
—, waking, automatic scoring, rat, 83
Spectral analysis, muscular sound, Maximum Entropy Spectrum Estimation, isometric contraction, 161
Spot scanning, computer modelling, proton depth dose, proton radiotherapy, 33
Statistics, computers, obstetrics, records, 43

User interface, communication aids, rehabilitation, 177

Voice-sensitive computer reporting, electrotechnology advances, medical data-base search, X-ray microtomology, 3

Waking, sleep, automatic scoring, rat, 83

X-ray microtomology, electrotechnology advances, voice-sensitive computer reporting, medical data-base search, 3
